

Halo FogSecure is arguably the most effective non-lethal Security device money can buy.

Halo FogSecure stops thieves in their tracks and causes them to exit your premises in seconds –empty handed.

Barriers, Locks, Alarms & CCTV can be found in every premises. However, thieves have no trouble bypassing these systems and preventing identification by wearing masks.

The loss of goods is one thing but damage to the store, equipment, records, staff trauma and loss of revenue through lack of stock or store closure causes greater damage overall.

Halo Security introduces Halo FogSecure in partnership with Concept Smoke Screen, U.K. who manufacture a tried and tested range of high-velocity fog generators.

Halo FogSecure can protect your store in seconds by deploying a harmless, yet highly-dense, fog cloud instantly.

## **Can't see it Can't steal it!**

The fog is harmless and one may breathe normally through it. All FogSecure fog generators are supplied with a 100% 'No Residue' and 'No Contamination' guarantee.

The key to the 'dry' smoke produced by Smoke Screen generators is the unique design of the heat exchanger. This is a precision-machined, steel heater block with a removable spiraled core. Heat is supplied by two 'Fire Rod' cartridge heaters originally designed as part of the NASA anti-ICBM 'Star Wars' project.

Halo FogSecure Smoke Screen systems have been rigorously tested and shown to be fully compliant with the British Standard BS7939, as well as the French CNPP and other European standards.

Smoke Screen carries the endorsement of the UK Police Forces as a 'Licensed Product' under the 'Secured By Design' scheme. Smoke Screen is in daily operation with a wide range of users. Many high street names such as Boots, Tesco and Vodafone have made Smoke Screen their security system of choice.

# Tesco Stores – existing client - United Kingdom

The following images were taken from genuine CCTV footage captured in a Tesco petrol filling station in Manchester, England. *A monitored alarm, roller shutter door, CCTV – nothing prevents these two thieves, intent on stealing cigarettes from behind the counter, from breaking and entering. Then Smoke Screen is activated and the burglary is finished (literally) in a few seconds.*

Little wonder that **Tesco** went on to make FogSecure standard as part of the security in all their Tesco Express stores.

The 'smoke' produced is harmless and guaranteed not to leave any form of contaminating residue.

*“Our stores were fitted with monitored alarms, shutters and CCTV. We tried everything and nothing stopped the losses.*

*Then we fitted Smoke Screen. The losses stopped !”*

**TESCO SECURITY DIRECTOR MIKE Gough**

**It stops thieves by taking away their ability to see – thieves can't steal what they can't see!**

**Case Study (*sequence of events*)**

# Tesco Petrol Filling Station – existing client – U.K.

**Monday, March 5<sup>th</sup>**

**TIME: 02:59:15**

The alarm in this Manchester petrol filling station is activated as two youths smash their way through the roller-shutter door.

**TIME: 02:59:47**

The thieves are inside. They ignore the intruder alarm and balaclavas obscure their features from the CCTV.

**TIME: 02:59:48**

As one youth jumps over the counter he triggers the Smoke Screen. Smoke is released instantly and the youth can be seen crouching down as the smoke obscures the cigarette display.

# Tesco Petrol Filling Station – existing client – U.K.

**Monday, March 5<sup>th</sup>**

**TIME: 02:59:50**

He recovers his wits and hurdles over the counter chasing after his fleeing accomplice.

This simple sequence proves conclusively that Smoke Screen **will** succeed where other forms of electronic and physical security have failed. Thieves know that they can smash their way into a premises, steal property and leave before the Police have time to react. Smoke Screen stops them in their tracks in seconds! Over 11,000 Smoke Screen systems have been sold in the UK. They are used in shops, offices, factories, service stations in fact anywhere where property and assets are at risk.

**Long before the cavalry arrives.....**

**TIME: 02:59:52**

**The break-in is over.** The thieves have been forced out and nothing has been stolen. In **2 seconds** Smoke Screen stopped the burglary!

# Boots – existing client - United Kingdom

Boots is one of the best known names on British high streets. In recent years, there has been a move to retail parks situated on the edge of towns. As a result, thieves have targeted the stores seeking to steal well known brands of perfume and cosmetics. Stores have been fitted with 'conventional' security: CCTV, monitored alarms and physical security such as shutters and grilles. These have failed to stop the increasing losses to burglary.

The following series of images graphically illustrates the effectiveness of Smoke Screen. The scene is not staged – these are real thieves and their reaction to the sudden appearance of smoke is genuine.

*Multiple Smoke Screen generators are located immediately above the protected area. Sensors ring the perfume counter acting as a safety 'hold-off' and allowing authorized personnel to enter and leave the store without activating the smoke.*

**Once the smoke is produced, the would-be thieves literally stop in their tracks and then run from the store - Empty-handed!**

*“We tried Smoke Screen in a number of priority stores – those suffering repeated break-ins. The effect was dramatic. We now have Smoke Screen in over 200 stores and we have seen burglary losses drop by 70%. Would I recommend Smoke Screen? Absolutely, it works!”*
